

The **New Edge** For Cloud Workspaces

The UC App Plug-in Problem

Unified Communications (UC) apps – e.g., Zoom, Teams, Webex, etc. – suffer performance issues with VDI given their resource-intensive delivery from the cloud to EUDs, and is not even available on a Tera2 zero client device. A UC app plug-in approach is the most common solution offered by VDI providers; however, it's unsecure & strips away features to improve delivery.

Optimal UC App Usage

Nedge's **MEET** is an edge-based, plugin-free media optimization solution for cloud VDI, supporting access to all UC apps with minimal latency with a Tera2 device, similar to what a high-powered Windows desktop delivers.

Differentiation	Benefits
Lower latency	No plug-ins
Higher frame rates	Lower UC vendor support
No installation / setup	Lower customer support
Feature-rich UX	High-end device UX

Industry Recognition

Nedge Computing Corp. has been named an IDC Innovator in the IDC Innovators: AI/ML at the Edge, 2024 (doc #US61793824, January 2024).

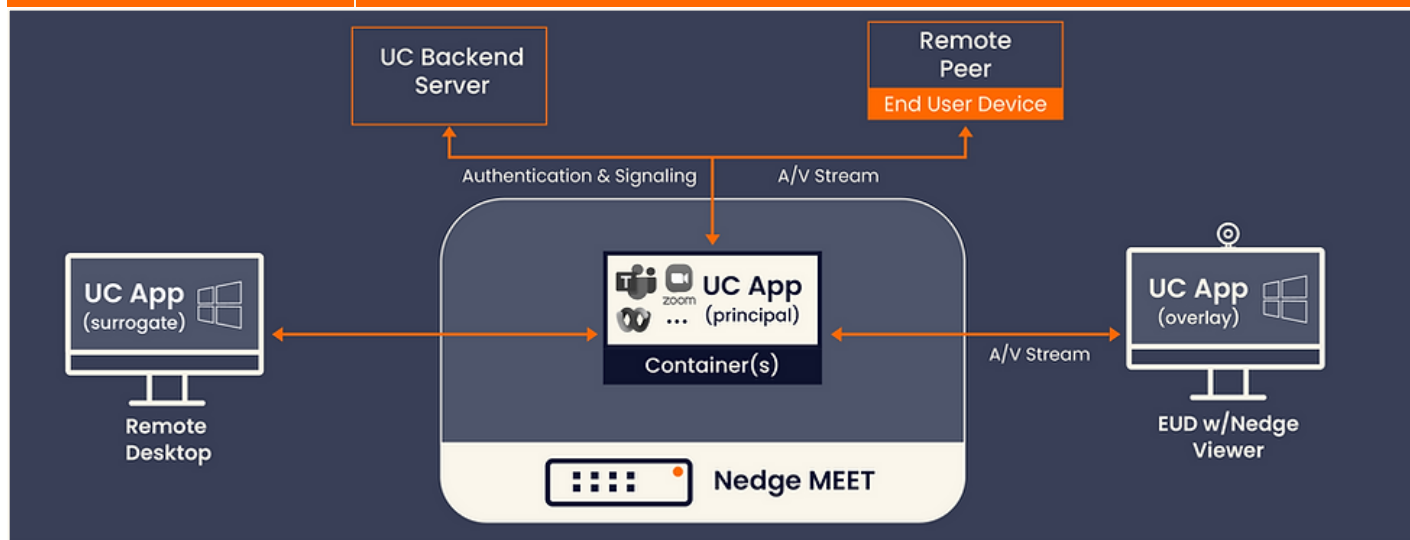

Edge-Based Platform ROI

Nedge's multi-purpose platform offloads and optimizes complex cloud apps (e.g., Zoom) – lowering IT TCO, heightening organizational control, and enhancing compliance with Zero Trust Architecture. With a little-to-no subscription fee, Nedge provides an immediate ROI by enhancing and extending the life of your Tera2 devices and current VDI.

MEET diagram below – first-time ever access to UC Apps with Tera2 devices.

Nedge MAP	Edge-based protocol translation (e.g, PCoIP<>Blast)
Nedge SURF	VM-based isolation on the Edge for safe(r) browsing
Nedge MEET	Edge-based, plugin-free Media Optimization for VDI UC

Use Case & Benefits

With Nedge's **MEET**, users can use UC Apps (like Zoom) directly from their Tera2 devices. As such, such users will be able to communicate and collaborate online just as users of high-powered devices ("thick clients").

CIOs & CFOs alike will benefit from both a planning and operations (50% reduction) standpoint by extending the life of their current Tera2 install base as well as providing an enhanced user experience (UX).
